Water Delivery Principles

For your zero energy Papa Pump site to be viable you must have...

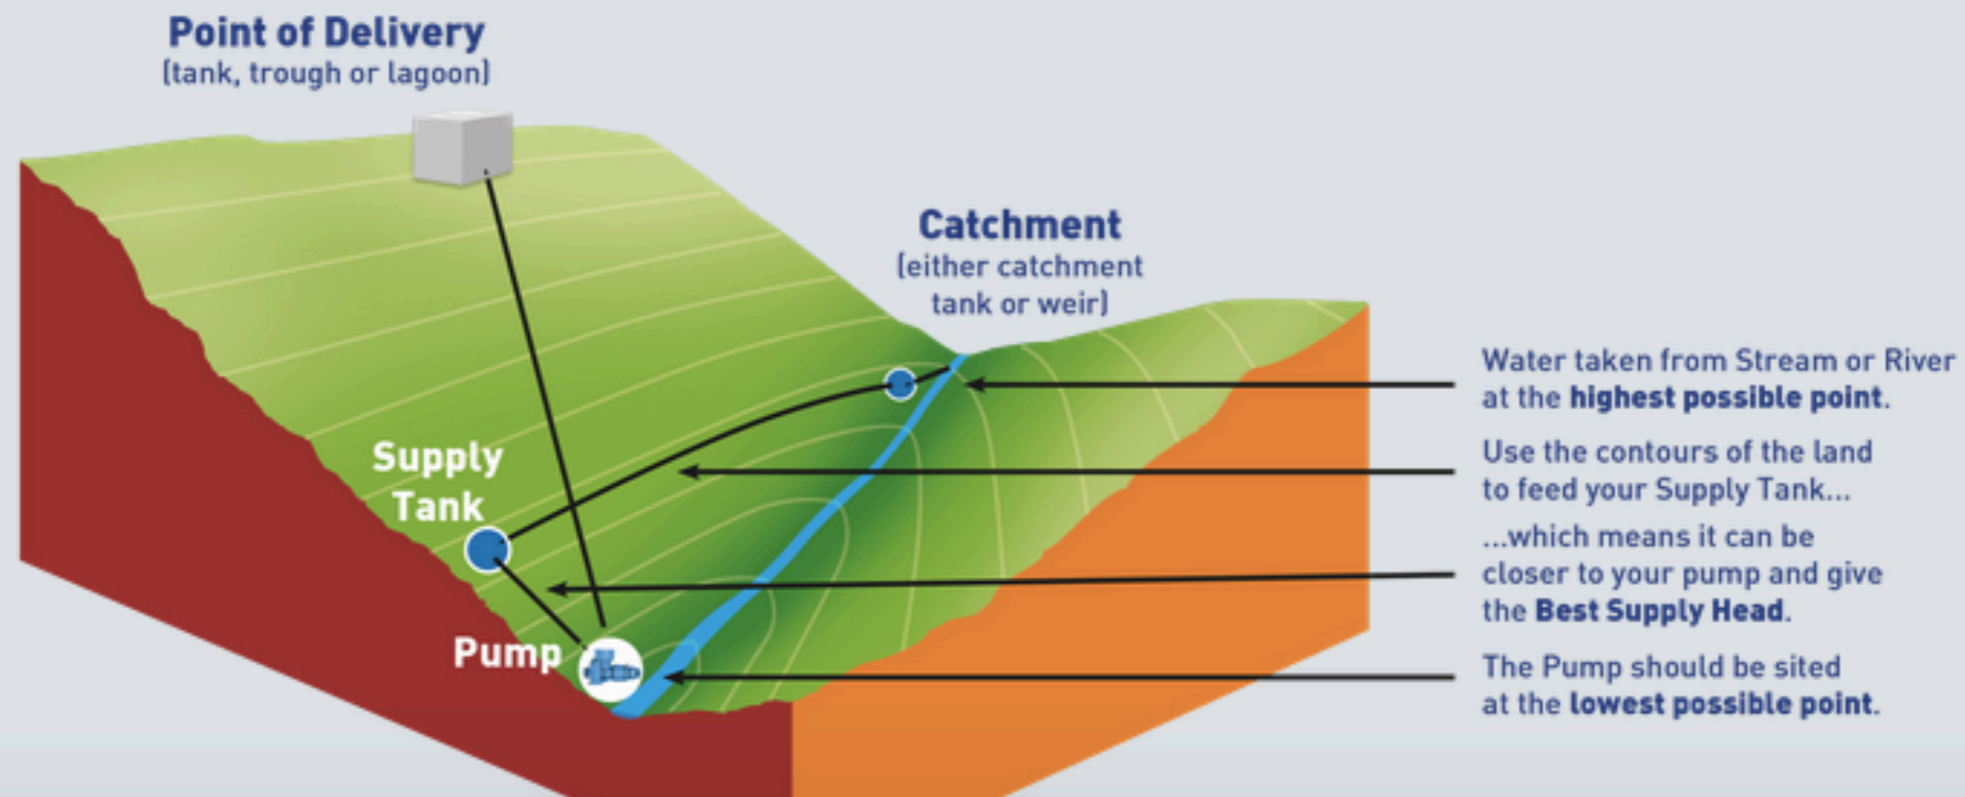

A spring, stream or river with a flow of at least 50 litres per minute

and the watercourse must fall to give you a Supply Head of a least 1 metre.

The Supply Head is the difference between the highest point of your watercourse and the lowest point across your land

**The greater the Supply Head, the greater the amount of water you can deliver
and the higher you can potentially lift the water.**

The main objectives to planning an efficient system is to maximise the Supply Head but to keep the Supply Pipe (between the Supply Tank and the Pump) as short as possible. You can achieve this by running the Feed Pipe (between the Catchment and the Supply Tank) along the contours of the land as shown below.
